

## INVESTMENT STRATEGY

Pacific Multi Asset is a Multi Asset & Multi Strategy fund within the sector Liquid Alternatives with a Targeted Absolute Return approach and the yearly return target is OMRXTBILL +5%.

The fund's main strategies are Fixed Income, Commodities, L/S Equity. The normal allocation is 15%, 30%, 55% but the manager uses an unconstrained tactical allocation between them and underlying sub-strategies (Commodities: Gold & Softs) (Equity: Long - Real Assets, Green Future, Millennium Trends & Short - Country/Sector Indices).

The fund mitigates issuer risks to a bare minimum and use a Dynamic FX Hedge (USD/SEK, EUR/SEK) to either protect or to enhance returns. Volatility is aimed to be 6 with a soft interval 4-8 and a hard interval 2-10. The risk classification shall thereby be able to vary between 3 and 4 but normally be 4.

The fund has a concentrated portfolio in very liquid holdings (~40-60) and in markets with large capacity which enables strategies and return potential to be independent of the fund's future size as well as inconstant market environments. Being a Swedish UCITS fund all aspects of security, costs and transparency are optimized.
